HEX

AN ISO 9001 : 2000 CO.

HEX Factory situated near Vapi, Gujarat.

1992 self-starter, dedicated engineers ventured to seed the Asia's largest industry of Cable Accessories and Connectors. The values set forth then, have been the cornerstone of the group's vision. Today the business of HEX in India abroad carries the hallmark, that would continue as a legacy. At HEX we pay tribute to our founders and pledge to uphold the HEX values and make them a way of life at work, in our personal lives and in the lives of those whom we touch.

HEX enjoys a close working relationship with all its retail chains. With an extensive network of dealers and distributors worldwide, you'll never be away from a HEX stockist. HEX ensures the best of advice from its trained staff, backed up with fast product availability.

A HEX customer can always count on systematically structured commercial organization that provides the most complete and advanced, pre and post sales service.

Its centralized services are designed to reap the benefits of economies of scale for newer opportunities and ancillaries. Growth and service is our essence. We are sure you will join those who have discovered HEX's outstanding record and its commitment recognizing its quality and professional service.

DEFINITIONS

CABLE TERMINAL ENDS :

As per IS-8337-1967. Cable Terminal is a connecting device with barrel accomodating respective conductor size of electrical cable and which has fixing arrangements of termination by means of a bolt fixing or pin insertions in tunnel type terminal blocks.

IN - LINE CONNECTORS :

This is a connecting device accomodating two electrical conductors to form a straight line.

PRODUCT USAGE

1. TERMINAL ENDS:

These are the most commonly used types of terminals ends. These tubular terminal ends, both for crimping and soldering, are manufactured from soft drawn, pure, high conductivity Copper tubes conforming to BS 1997. They are fully annealed to ensure qualities of electrical and mechanical strength and are also produced from Aluminium tube as per IS 5082. (mainly used with power distribution cables)

2. IN - LINE CONNECTORS & FERRULES :

These are manufactured from soft drawn bare Copper tube as per BS 1977 and Aluminium as per IS 5082 to obtain high electrical & mechanical strength. They are used for straight through joints for joining of cable conductors.

3. RING TYPE TERMINAL ENDS:

These are manufactured from high conductivity Copper and are electro-tinned for corrosion resistance. Ring type terminal ends are available in different sizes to serve the different joining techniques such as Crimping, Soldering & Welding.

4. PIN TYPE TERMINAL ENDS :

These terminal ends are available in three types i.e. Round, Regular & Flat. They are mainly used for control cables, terminal station, flexible cord, for smaller sizes of cables etc. Pin type terminal ends are generally available for crimping type of connections which are made out of high conductivity Copper.

5. FORK TYPE TERMINAL ENDS :

These types of terminal ends are mainly used for termination of Flexibles, Cords, Control cables, Meters fo control panel cubicles, Contractors etc. They are made of high conductivity Copper.

6. REDUCER TYPE TERMINAL ENDS:

Reducers of Copper Pin Terminals are produced to meet the needs of cable entering, Copper tunnel clamps such as Fine Gears, Cutouts, Meters etc. They can be connected by the soldering or crimping method and are made of Copper for crimping and of brass for soldering.

FIELD OF APPLICATION

Various Industries, Product & Areas where the Terminal ends can be used are as given below:

1. Electrical Industries :-
   a) Control panels
   b) Switch Gears
   c) Transformers
   d) Circuit Breakers
2. Electricity Boards like MSEB, BSES etc.
3. Power projects like NTPC, NHPC, EIL, NPC etc.
4. Satellite & Communications Ind.
5. Power Generation & Distribution
6. Shipping Industries
7. Automobile Industries
8. Steel & Fertilizers Industries
9. Railways
10. Chemical Projects
11. Cement & Textile Industries
12. Electronic Industries
13. Mining Industries
14. Aeronautics Industries
15. Defence
16. Domestics

A CONVENIENT SOLUTION

HEX Cable Terminal Ends offer the following advantages :-

1) Safe and low cost both in design and use.

2) All Copper products are Electro-tinned to B. S. standard and this prevents it from corrosion and oxidation.

3) P. V. C. insulation is provided to terminals for exceptional Die-Electric strength and for supporting the wire insulation at the base of the terminal, thereby ensuring that no bare wire is exposed.

4) Entry to the wire barrel is shock-proof, or bell mouthed for faster and easier conductor entry.

5) P. V. C. insulation with copper sleeve fitted over the terminal barrel provides circumferential insulation support to the wire and prevents the loss of connection due to vibration, of flexing in use.

6) All products are manufactured under strict Quality control and conform fully to the specification and requirements. Our services are also available to solve customer problems and to provide improvement.

300 mm² to 630 mm² - 2.0 x 105 N.
Above 630 mm² - 4.0 x 105 N.

Construction :
Forged circular Copper palm is friction welded to an EC grade Aluminium circular barrel thus achieving the best possible transition.
Made to order Bi - Metallic terminals as per the customer's specifications / samples / diagrams are also available.

ALUMINIUM - COPPER BI - METAL CONNECTOR / SPLICE

Material : E - Copper
Finish : Uncoated / Electro Tinned

Al-Cu Bi-Metal splice are used for joining Aluminium Cable to Copper Cable.

COPPER BONDED GROUNDING ROD

"HEX" copper bonded earth rod are made from low Carbon Steel of Grade BS 970 or AISI 1018 with a high tensile strength of at least 600 N/mm2 . Low Carbon Steel core are molecularly bonded with 99.9% pure Electrolytic Copper.

Salient Features :

- Perfectly bonded rod will last longer, drive easier and will not crack.
- Corrosion resistance while providing the lowest resistance to ground.
- Threads are rolled by roll threading process, which ensures that an even copper covering is maintained, even at the root of the thread. Roll thread gives greater strength than cut thread.
- Thread rolling process raises the surface of the rod, so that Thread dia. (T) is greater than Shank dia. (S).

STAINLESS STEEL GROUND ROD

" HEX " Stainless Steel ground rods are used to overcome many of the problems caused by galvanic corrosion which can take place between dissimilar metals buried in close proximity. Other advantages of Stainless Steel rod are that they are highly resistant to corrosion and are much more anodic than Copper.

EARTH SEAL

The earth rod seal is fitted when the earth rod connection is below the water level and where there is a possibility of water entering the inspection housing from below ground. The seal is particularly useful where internal earths are required such as in a basement building. Both single an d double flange seals can be adapted to suit our full range of earth rod diameters by use of special compression rings and seals. The seals are used in conjunction with the HEX heavy duty earth inspection housings.

PLASTIC EARTH PIT / HOUSING

This 'HEX' Earth housing pit is manufactured from heavy high-grade polypropylene for high strength & stress levels to absorb a maximum load of 2000 kg. Stabilised against degradation by non-brittle and by sunlight to prevent cold weather damage. The light weight feature allows easy handling, storage and transportation, thus increasing installation efficiency. Termination area is increased by 100% due to simple locking of two units together, allowing deeper earth electrode connections to be made and reducing the effects from harmful voltage gradients.

TEREC

EARTH ENHANCING MIRACLE COMPOUND

What happens with normal Earthing using Salt & Charcoal

The Electrical drain gets clogged in summer allowing electrical energy to remain in the circuit destroying the electronic and electrical goods

The TEREC + Advantage

- Miracle compound
- Achieves resistance acceptable to any international body
- Maintenance Free
- Low Step and Touch Potential
- Environmentally Friendly
- Saves your electrical and electronic equipments from ground faults

The Electrical drain does not get clogged allowing immediate exit of the energy keeping al equipments intact.

Physical Properties

Presentation	: In granular form.
Granulometry	: 0.85mm to 4mm
Colour / Smell	: Grey / Inodorous
Volumetric Mass	: 500 to 650 Kg/m3 compressed 450 to 500 Kg/m3 uncompressed
Solubility in water	: Partially miscible
PH Value	: 6.9 to 7.2 of 1000gm/lit At 20o C

Miracle Compound For Earthing

• Ionic chemicals	- Salts creates ions for easy conduction.
• Dispersion chemicals	- Spreads the salts equally in the earth pit.
• Expansion chemicals	- Expands 18 to 20 times and removes entrapped air to create strong connection between rod and soil.
• Diffusion chemicals	- Diffuses into soil pores and creates conductive silicate roots enlarging conductive zone of earth pit.
• Hygroscopic chemicals	- Absorbs atmospheric & surrounding moisture & retain it in the soil in form of jelly.

The Early Streamer Emission Lightning Conductor Including Teletesting supervision

This third generation of the Duval Messioen "Satelit" range uses this technology to force the lightning strike to follow a predetermined path towards the earthing system. The Satelit 3 concept consists of polarising the lighting conductor tip with a voltage of between 35 kV and 45kV, synchronised with the progress of the descending tracer, and of triggering an anticipated start for the ascending tracer. with its Satelit 3 Duval Messien is offering a ground-breaking development by introducing a remote system testing facility: the TELETESTER-S3. The Satelit 3 range comprises three models with different performance characteristics: the Satelit 3-25, the Satelit 3-45 and the Satelit 3-60.

Proven Performance

Satelit 3 lightning conductors have been conducted in various countries by independent, approved laboratories, as well as in France at the Bazet Test Centre (COFRAC approved) under Lioyd's Register control (the certifier European body).

A New Lightning Conductor Concept

Satelit 3 has been designed around a 304L quality Stainless Steel shell in order to guarantee high resistance to impacts, corrosion and chemical agents.The electronic components selected for the Satelit 3 are completely protected inside an inert resin block.The spark gap, any body steel is designed to conduct currents greater than 180 kA. The Satelit 3 is powered by a NI-MH type battery, continuously recharged indestructible, flexible solar cells. Faces of each cell are made of Ethylene Tetra Fluoro-Ethylene (ETFE). As well as being adhesion resistant, it does not turn Yellow or crack up over time.

Duval Messien A Century Of Innovations

The origins of this success are to be found in the union of two great talents: that of Paul Duval, in 1835. Today, it is recognised as one of the world's leading experts in the field of lightning protection.Benefiting from ISO 9001 and Qualifelec Certification and MASE approval, has 2 operational units in France.

PROTECTOR /Omsgi

ESE Lightning Conductor

Typical Installation Scheme

1. Air Terminal - Protector
2. Support Mast
3. Down conductor
4. Lightning Strike Counter
5. Test Joint
6. PVC Protective Sheath
7. Earth Terminal

Salient Features

- The Protector is an ESE type of 'active' lightning conductor that provides zonal protection in accordance with standard NF C 17 102.
- The PROTECTOR is a sturdy robust device made of 304 L stainless steel.
- It is protected against corrosion and needs no maintenance.
- Needs no external power source.
- Compact and easy to install.
- Warrantee for 2 years.
- Tested and certified by ODTU University Laboratories in Turkey (Europe).

Applications

- Large multistoried / high rise residential complexes and housing colonies. A single Protector can cover several blocks.
- Large multistoried / high-rise office complexes, multiplexes, shopping malls, etc.
- Modern buildings housing IT offices, BOP's and concentration of sensitive electronic and / or telecom equipment.
- Factories having plc based controls for critical plant and machinery
- Hospitals, cinema halls, museums, old monuments, schools etc.

DIN RAIL CHANNELS

"HEX" offers a complete range of DIN RAILS for the mounting of terminal blocks, MCB's etc. These steel rails are manufactured from cold roll steel and processed in various types through rolling. The finish is zinc electroplated with yellow passivation. Also available with white passivation, as per RoHS compliance, against specific order .
All rails are available in 1 mtr. & 2 mtr. length and in three types ie. Plain (P), Punched / Dotted (D) & Slotted (S).

While ordering add the type :
P for (Plain), D for (Dotted/Punched) and S for (Slotted).

ROLLER BALL TYPE STAINLESS STEEL CABLE TIES

Material : Stainless Steel Grade 316/304

Features :
- This roller ball design tie are self locking and very easy to install.
- Fixing can be done by hand, tool & both.

Specification :
- Min. loop tensile strength - 4.6mm width (44.5kg) 100 lbs
- Min. loop tensile strength - 7.9mm width (113.6kg) 250 lbs

Operating Temperature :
-80°C to +150°C (Coated)
-80°C to +538°C (UnCoated)

Applications :
Construction, Automobile, Offshore, Petro-Chemical Industries, Fire Protection, Aerospace, Flame Proof Installation etc.
